

GASCOIGNE HAULAGE
PTY LTD

CAPABILITY STATEMENT

WATER CARTING & WATER SUPPLY SERVICES

Dust Suppression | Potable Water | Wet Hire | Standby Fire Protection
Rigid Water Carts | Semi Water Cart

Company Overview

Gascoigne Haulage is a reliable, family-owned and operated water haulage business servicing regional New South Wales. With a strong understanding of the requirements of civil, agricultural and regional projects, Gascoigne Haulage provides dependable solutions with a focus on safety, reliability, responsiveness and quality service.

Our practical experience, local knowledge and hands-on approach allow us to work effectively alongside principal contractors, project managers, civil contractors, agricultural businesses and other commercial and government clients.

Gascoigne Haulage prides itself on being responsive, straightforward and easy to work with. We work closely with our clients to understand project requirements, coordinate water utilisation and requirements and, respond efficiently to changing site conditions and operational demands.

Our
COMPANY

Our MISSION

Our mission is to provide safe, reliable and professional water haulage services that contribute to the successful delivery of every project we undertake.

We are committed to building long-term client relationships through:

- Reliable, timely, and consistent service
- Safe and responsible work practices
- Clear and professional communication
- Well-maintained equipment
- Responsive project support
- Practical, solutions-focused service
- Delivery of work to agreed requirements and timeframes

CAPABILITIES & SERVICES

Gascoigne Haulage provides bulk water transport services suited to civil construction, forestry, infrastructure, agricultural and regional projects.

Core Services:

- Rigid & semi water cart services hire
- Water supply and delivery for site operations
- Potable Water Deliveries
- Dust suppression
- Swimming Pool Filling
- Standby Fire Protection
- Supply of water to on-site spraying teams
- Construction and civil project support

We work with clients to understand the specific requirements of each site, including access, scheduling, safety requirements, environmental considerations and coordination with other contractors.

FLEET & EQUIPMENT

Gascoigne Haulage operates a fleet of rigid and semi water carts, providing flexibility to service different project sizes, locations and water requirements.

Our fleet is maintained with a strong focus on:

Reliability
Safety
Preventative maintenance
Operational readiness
Cleanliness
Suitability for intended use

We recognise that equipment reliability is critical to our clients. An unavailable water cart can quickly affect site productivity, dust suppression and project schedules.

Our approach to vehicle maintenance is therefore focused on identifying and addressing issues before they impact service delivery wherever practicable.

Fleet Capability

Rigid Water Carts - Capacity 12,000L

Our rigid water carts provide a flexible solution for construction, civil, agricultural and general water delivery applications, particularly where manoeuvrability and access are important considerations.

Semi Water Cart - Capacity 25,000L

Our semi water cart provides increased water carrying capacity and is suited to larger projects and applications requiring higher-volume water delivery. Together, our rigid and semi water carts allow us to provide a scalable water carting solution suited to individual project requirements.

Operational Strength and Point of Difference

Gascoigne Haulage's strength is built around practical experience, reliability and a strong understanding of regional and project-based operations.

We recognise that haulage requirements can change quickly. Weather, site conditions, production schedules, access restrictions and project timeframes can all affect water requirements. Our hands-on approach allows us to respond to these challenges efficiently while maintaining a strong focus on safety and service quality.

Our Key Points of Difference

Responsive and Flexible Service

We can respond to changing project requirements and work collaboratively with clients and site personnel to accommodate operational demands.

Safety-Focused Operations

Safety is embedded into our day-to-day operations, with a focus on identifying hazards, maintaining equipment and ensuring work is undertaken in accordance with site requirements and applicable procedures.

Well-Maintained Equipment

Equipment reliability is fundamental to our service. Preventative maintenance and regular inspections help minimise downtime and support consistent project delivery.

Direct Communication

As a hands-on, owner operated business, clients have direct access to decision-makers. This supports clear communication, accountability and timely resolution of operational issues.

Practical Problem Solving

We take a solutions-focused approach to our work. Where site conditions or project requirements change, we work with clients to identify practical and efficient solutions.

Commitment to Clients

Our objective is to establish long-term working relationships rather than simply complete individual jobs. We understand our performance reflects directly on the projects and contractors we work alongside.

SAFETY

Safety is a fundamental component of Gascoigne Haulage's operations. We recognise our responsibility to protect our employees, clients, other contractors, members of the public and the environment in which we operate. Our approach to safety is proactive and practical, with a focus on identifying hazards before work commences and maintaining effective controls throughout the duration of the work.

Our safety practices include:

- Pre-start and equipment inspections
- Site inductions and compliance aligned with client requirements
- Task-specific risk assessments
- Safe Work Method Statements where required
- Toolbox talks and safety discussions
- Appropriate personal protective equipment
- Traffic and vehicle safety controls
- Vehicle and equipment maintenance
- Incident and hazard reporting
- Ongoing communication with site personnel
- Compliance with relevant legislation, standards and client procedures

We encourage a safety culture where employees are expected to identify hazards, speak up about potential risks and take responsibility for maintaining safe work practices.

ENVIRONMENTAL RESPONSIBILITY

Gascoigne Haulage recognises the importance of responsible environmental management across all transport and site-based activities. Our operations are undertaken with consideration for potential environmental impacts including dust, water use, spills, waste, vehicle emissions, noise and disturbance to surrounding areas.

We seek to minimise environmental impacts through practical controls such as:

- Effective dust suppression
- Responsible water use
- Appropriate vehicle and equipment maintenance
- Spill prevention and response
- Correct handling of fuels, oils and other materials
- Compliance with site-specific environmental requirements

Our approach is based on preventing environmental impacts wherever practicable and responding quickly and appropriately where an issue does arise.
